

AMENDMENTS TO THE CLAIMS:

1-21. (Cancelled)

22. (Currently Amended) A data communications server system, comprising:
- an information network;
 - means for logging into the information network;
 - a communications portal resident on a server and accessed over an information network to present information associated with an individual implantable medical device patient, comprising:
 - means for allowing a user to log-in to the communications portal;
 - means for making a user verification;
 - means for automatically presenting a ~~customized~~ web page customized to the individual implantable medical device patient that includes a display of information relevant to the implantable medical device implanted in the patient;
 - means for accessing implantable medical device, patient medical records, and patient lab records databases over the information network; and
 - means for integrating accessible databases through user selectable links.
23. (Previously Presented) The data communications server system of claim 22 further comprising a web browser connectable to the communications portal by entering a portal URL.

24. (Previously Presented) The data communications server system of claim 22 wherein the communications portal further comprises a physician welcome interface.
25. (Previously Presented) The data communications server system of claim 24 wherein the physician welcome interface comprises a listing of all implantable medical device patients being treated by a physician.
26. (Previously Presented) The data communications server system of claim 24 wherein the physician welcome interface comprises an email link, a print link, and a product information link.
27. (Previously Presented) The data communications server system of claim 24 wherein the physician welcome interface comprises means for accessing a search engine to locate information on servers accessible to the communications portal.
28. (Previously Presented) The data communications server system of claim 22 further comprising means for accessing back office automation operations comprising patient follow-up scheduling and automated billing of services.
29. (Previously Presented) The data communications server system of claim 22 wherein the means for presenting a customized web page provides for presentation of one or more of a physician web page portal and a patient web page portal, and wherein each of the web page portals comprises personalized content based on user role.
